

NAAN MUDHALVAN - NIRAL THIRUVIZHA 3.0 (2025 - 2026)

MANDATORY PROJECT JOURNEY VIDEO SCRIPT & STORYBOARD

Project Title: Keffi AI - Clinical Digital Therapeutics & Real-Time Biofeedback-Synced CBT Platform

Team Members: Balaji P (Leader), Madhumathi S, Malini V

Faculty Guide: Dr. Sivanesh, Assistant Professor, Dept. of CSE

Institution: University College of Engineering, BIT Campus, Anna University, Tiruchirappalli

Duration: 2 Minutes 30 Seconds

VIDEO STORYBOARD & SCENE-BY-SCENE SCRIPT

SCENE 1: THE INSPIRATION & PROBLEM STATEMENT (0:00 - 0:35)

- Visual: Montage of students experiencing stress during exams, followed by statistical graphics showing 50-60% treatment dropout rates and lack of available psychiatrists in India.
- Voiceover (Team Member):

> "Greetings! We are Team Keffi AI from Anna University BIT Campus, Tiruchirappalli. Did you know that over 50% of people dealing with depression and anxiety don't get timely help due to stigma, high costs, or long gaps between therapy sessions? Under Niral Thiruvizha 3.0, we took up the challenge: How might we use AI and machine learning to stop patient dropout and provide continuous, clinically safe mental health care?"

SCENE 2: BOOTCAMP & INTERNAL REVIEWS JOURNEY (0:35 - 1:05)

- Visual: Video clips / photos of team members participating in Naan Mudhalvan bootcamp sessions, mentoring with Dr. Sivanesh, presenting at Internal Review 1 and Internal Review 2 at Anna University.
- Voiceover (Team Member):

> "Our journey began with deep research into Cognitive Behavioral Therapy (CBT). Guided by our mentor Dr. Sivanesh, we attended Naan Mudhalvan bootcamp sessions, refined our model architecture, and successfully cleared Internal Reviews 1 and 2. We moved from concept to fine-tuning a 96-emotion BERT neural network classifier."

SCENE 3: PROTOTYPE DEMONSTRATION & INNOVATION (1:05 - 1:55)

- Visual: Screen recording of Keffi AI in action.
 1. User chatting on the screen-filling, frosted glass UI.
 2. Keffi recognizing subtle emotional shifts using facial emotion tracking and heart rate biofeedback simulations.
 3. Keffi launching somatic 4-7-8 breathing exercises and acoustic soundscapes.
 4. Crisis trigger popup showing emergency helpline and 1-click human therapist booking.
- Voiceover (Team Leader - Balaji P):

> "Meet Keffi AI! Keffi isn't just another chatbot. It understands 96 granular emotional states using BERT, remembers past interactions using vector memory, and tracks physiological stress with PPG heart-rate biofeedback. If a user enters crisis

mode, Keffi instantly launches therapeutic grounding audios and connects them with certified human therapists."

SCENE 4: IMPACT & NIRAL THIRUVIZHA THANKS (1:55 - 2:30)

- Visual: Team members sitting together in the lab working on the system, displaying the project report copies and institution logo.
- Voiceover (All Team Members):

> "Niral Thiruvizha 3.0 gave us the platform, mentorship, and financial seed support of ₹15,000 to transform our idea into a working clinical prototype. We are ready for the Regional Final Review at Anna University BIT Campus, Trichy, and excited to take Keffi AI to clinics, colleges, and workplace wellness programs across Tamil Nadu. Thank you, TNSDC and Naan Mudhalvan!"

VIDEO PRODUCTION CHECKLIST

- [x] Resolution: 1080p Full HD (Landscape format)
- [x] Audio: Clear voiceover with background instrumental music
- [x] Subtitles: English captions included
- [x] Total Duration: ~2 mins 30 secs (Well within 2-3 minute guideline)
- [x] Submission Link: Uploaded to Google Form per circular instructions
